Safe Harbor

Forward-looking statements

This presentation includes "forward-looking statements" within the meaning of the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. These forward-looking statements include, but are not limited to, statements about our plans, objectives, representations and contentions, and are not historical facts and typically are identified by terms such as "may," "will," "should," "could," "expect," "plan," "anticipate," "believe," "estimate," "forecast", "predict," "potential," "continue" and similar words, although some forward-looking statements are expressed differently. You should be aware that the forward-looking statements included herein represent management's current judgment and expectations as of the date the statement is first made, but our actual results, events and performance could differ materially from those expressed or implied by forward-looking statements. We caution you not to place undue reliance upon any such forward-looking statements. We do not intend to update any of these forward-looking statements or publicly announce the results of any revisions to these forward-looking statements, other than as is required under U.S. federal securities laws. Our business is subject to numerous risks and uncertainties, including those relating to fluctuations in our operating results on a quarterly and annual basis; our substantial dependence on developing new products and achieving design wins; our dependence on several large customers for a substantial portion of our revenue; a loss of revenue if defense and aerospace contracts are canceled or delayed; our dependence on third parties; risks related to sales through distributors; risks associated with the operation of our manufacturing facilities; business disruptions; poor manufacturing yields; increased inventory risks and costs, due to timing of customers' forecasts; our inability to effectively manage or maintain relationships with chipset suppliers; our ability to continue to innovate in a very competitive industry; underutilization of manufacturing facilities; unfavorable changes in interest rates, pricing of certain precious metals, utility rates and foreign currency exchange rates; our acquisitions, divestitures and other strategic investments failing to achieve financial or strategic objectives; our ability to attract, retain and motivate key employees; warranty claims, product recalls and product liability; changes in our effective tax rate; enactment of international or domestic tax legislation, or changes in regulatory guidance; changes in the favorable tax status of certain of our subsidiaries; risks associated with social, environmental, health and safety regulations, and climate change; risks from international sales and operations; economic regulation in China; changes in government trade policies, including imposition of tariffs and export restrictions; we may not be able to generate sufficient cash to service all of our debt; restrictions imposed by the agreements governing our debt; our reliance on our intellectual property portfolio; claims of infringement of third-party intellectual property rights; security breaches, failed system upgrades or regular maintenance and other similar disruptions to our IT systems; theft, loss or misuse of personal data by or about our employees, customers or third parties; provisions in our governing documents and Delaware law may discourage takeovers and business combinations that our stockholders might consider to be in their best interests; and volatility in the price of our common stock. These and other risks and uncertainties, which are described in more detail under "Risk Factors" in Part I, Item 1A of our Annual Report on Form 10-K for the fiscal year ended March 30, 2024, and Qorvo's subsequent reports and statements that we file with the SEC, could cause actual results and developments to be materially different from those expressed or implied by any of these forward-looking statements.

For more information regarding non-GAAP financial measures, see the Supplemental Information on Non-GAAP Financial Measures section included with this presentation. For a reconciliation of GAAP to non-GAAP financial measures, please refer to our earnings releases for the relevant performance periods, available on our Investor Relations website at ir.qorvo.com under Financial Releases, or the Reconciliation of GAAP to non-GAAP Financial Measures section included at the end of this presentation.

Compelling Strategic Positioning

- Serving attractive markets
 underpinned by secular trends, technology transitions and multiyear upgrade cycles
- Trusted partner with broad market reach across customers, suppliers and global ecosystems
- O3 Competing and winning where customers value performance, technology and speed to market
- Leveraging unique competitive strengths to drive innovation, expand capabilities and grow in new and existing markets
- Targeted investments
 in differentiated products, technologies and manufacturing capabilities that deliver customer value

QOCVO

Manufacturing Strategy

Footprint supports long-term growth while reducing capital intensity

Footprint priorities: Generate more revenue leveraging others' capital

Qorvo's manufacturing strengths are highly differentiated and difficult to replicate

- o Invest in internal manufacturing where it differentiates our products
- Leverage others' capital where foundries and OSATs are available
 - Si, SOI, SiC, SiGe, and GaAs
 - Out-sourced assembly and test (OSAT)

On-shore SAW, BAW, GaAs, GaN

- Leading provider to US DoD of GaN/GaAs foundry processes and advanced packaging
- Continue to iterate over multiple generations
- Resilient, cost-effective supply chain
- Robust network of foundries and OSATs

QOCYO

Systems-Level Expertise

Enabling better performing, smaller, lower power solutions

Delivering Systems-Level Solutions

Supported by:

- Addressing advanced integration trends
- Accelerating customer device speed to market
- Driving enhanced end user experiences
- Software and machine learning

 Manufacturing expertise across process, device, component and packaging technologies

How Qorvo Wins

Differentiating across key parameters

Customer requirements are consistent across markets:

- · Performance enhancements
- Power savings
- Size reduction

Delivering More Intuitive User Experiences

From context awareness to transforming the human machine interface

Our unique core technologies

Force Sensing

Ultra-

Wideband

- + MEMS
- + ASIC + SoCs
- + Embedded software
- + Android integration

How our customers leverage our technologies

Force Sensing

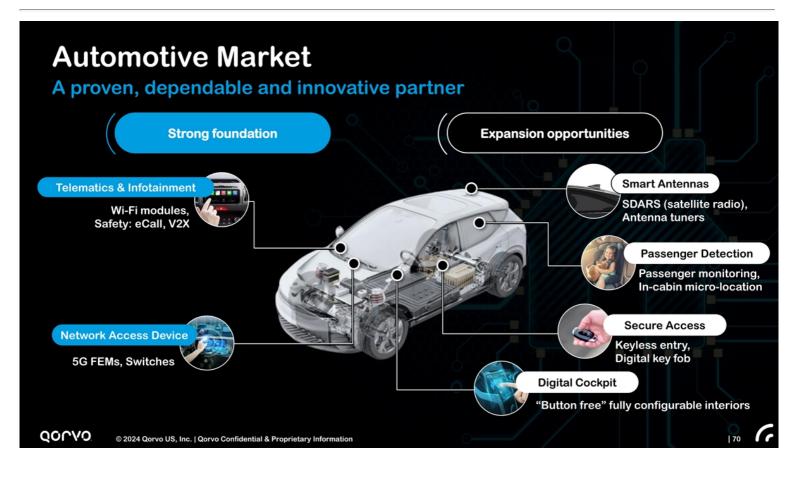

- Replace mechanical buttons
- Make any surface interactive
- Enable reliable and sleek industrial designs

UWB

- Location-based interactions
- Secure communication
- Presence, gesture detection

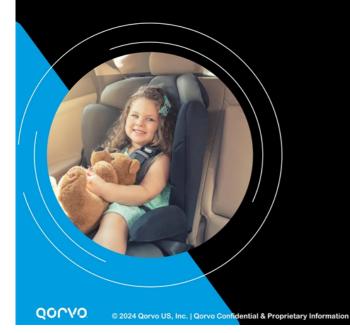

Achievements

- From three startups to scale in three years
- Three generations of UWB in Android phones
- Design in Asus laptop trackpad

Bringing Security, Safety & Convenience

From secure car access to child presence detection

Our unique core technologies

- + Antennas
- SoCs
- + Embedded software
- + Custom algorithms

How our customers leverage our technologies

- End-to-end solution; from antenna to application
- Car to Mobile interoperability expertise
- Customizable open platform

Achievements

- From startup to automotive grade chip in two years
- Won largest UWB car access platform
- Expanding footprint within >\$2B opportunity

Industrial & Enterprise Market

Unleashing the digital transformation

What we enable

- Digital twins that drive operational efficiencies
- Virtual fences that improve workers safety
- Enabling turn by turn indoor navigation

Our strengths

- · Pioneers in real time location technology
- Robust RF solutions that work in harsh environments
- Portfolio: sense, compute, connect, power management

Achievements

- >90% Market share in Industrial UWB location services
- Deployed in factories, logistics centers, enterprise APs

Becoming a Broad Market Leader - One Step at a Time

Foundation in place – scaling and expansion underway

Targeting Strong
Double-digit
Revenue Growth

FUTURE

Establish broad market leadership

- Portfolio of market specific solutions
- Low-touch model from online presence to channel

Expand and drive synergies

- Leverage portfolio and expertise to build full solutions & cross sell
- Secure key design wins across Automotive, Enterprise, Consumer
- On track to support strategic growth and diversification initiatives

Scale our teams and portfolio

- Team of 400 engineers from SoCs to SW and applications
- First UWB SoC 22nm Matter platform Force+Ultrasonic sensor
- First major Automotive UWB win; Force Trackpad wins; Second UWB Mobile OEM win

PAST

Acquire and Build the Foundation

- Assemble the team through acquisitions and organic growth
- First UWB Mobile design win; First Automotive Force Sensing design win

Compelling Investment Thesis

Thriving on ever-increasing complexity

- 01 Strong tailwinds within large addressable markets
- 02 Broadly applicable core competitive strengths and leading technology portfolio
- 03 Expanding breadth across markets, customers and product categories
- 04 OpEx discipline and decreasing capital intensity / demand-driven CapEx
- 05 Investing for growth and diversification while upgrading core enterprise systems
- 06 Achievable revenue targets supporting sustainable EPS growth

Supplemental information on Non-GAAP financial measures

In addition to disclosing financial results calculated in accordance with United States (U.S.) generally accepted accounting principles (GAAP), this presentation contains some or all of the following non-GAAP financial measures: (i) non-GAAP revenue, (ii) non-GAAP gross margin, (iii) non-GAAP operating margin, (iv) non-GAAP operating expenses (research and development; selling, general and administrative), (v) non-GAAP net income per diluted share, (vi) free cash flow, (vii) non-GAAP return on invested capital (ROIC), and (viii) net debt. Each of these non-GAAP financial measures is either adjusted from GAAP results to exclude certain expenses or derived from multiple GAAP measures, as described below. For a reconciliation of GAAP to non-GAAP financial measures, please refer to our earnings releases for the relevant performance periods, available on our Investor Relations website at ir.qorvo.com under Financial Releases, or the Reconciliation of GAAP to non-GAAP Financial Measures section included at the end of this presentation.

In managing Qorvo's business on a consolidated basis, management develops an annual operating plan, which is approved by our Board of Directors, using non-GAAP financial measures. In developing and monitoring performance against this plan, management considers the actual or potential impacts on these non-GAAP financial measures from actions taken to reduce costs with the goal of increasing gross margin and operating margin. In addition, management relies upon these non-GAAP financial measures to assess whether research and development efforts are at an appropriate level, and when making decisions about product spending, administrative budgets, and other operating expenses. Also, we believe that non-GAAP financial measures provide useful supplemental information to investors and enable investors to analyze the results of operations in the same way as management. We have chosen to provide this supplemental information to enable investors to perform additional comparisons of our operating results, to assess our liquidity and capital position and to analyze financial performance excluding the effect of expenses unrelated to operations, and stock-based compensation expense, which may obscure trends in Qorvo's underlying performance.

We believe that these non-GAAP financial measures offer an additional view of Qorvo's operations that, when coupled with the GAAP results and the reconciliations to corresponding GAAP financial measures where necessary, provide a more complete understanding of Qorvo's results of operations and the factors and trends affecting Qorvo's business. However, these non-GAAP financial measures should be considered as a supplement to, and not as a substitute for, or superior to, the corresponding measures calculated in accordance with GAAP.

Supplemental information on Non-GAAP financial measures (continued)

Our rationale for using these non-GAAP financial measures, as well as their impact on the presentation of Qorvo's operations, are outlined below:

Non-GAAP revenue. Non-GAAP revenue (for fiscal 2016) excludes non-cash deferred royalty revenue. We believe that the exclusion of this non-cash adjustment to revenue provides management and investors a more effective means of evaluating our historical and projected performance.

Non-GAAP gross margin. Non-GAAP gross margin excludes amortization of intangible assets, stock-based compensation expense, restructuring-related charges, acquisition and integration-related costs and certain other expenses. We believe that exclusion of these costs in presenting non-GAAP gross margin facilitates a useful evaluation of our historical performance and projected costs and the potential for realizing cost efficiencies. We view amortization of acquisition-related intangible assets, such as the amortization of the cost associated with an acquired company's research and development efforts, trade names, and customer relationships, as items arising from pre-acquisition activities, determined at the time of an acquisition, rather than ongoing costs of operating Qorvo's business. While these intangible assets are continually evaluated for impairment, amortization of the cost of purchased intangible assets is a static expense, which is not typically affected by operations during any particular period. Although we exclude the amortization of purchased intangible assets from these non-GAAP financial measures, management believes that it is important for investors to understand that such intangible assets were recorded as part of purchase price accounting and contribute to revenue generation. We believe that presentation of non-GAAP gross margin and other non-GAAP financial measures that exclude the impact of stockbased compensation expense assists management and investors in evaluating the period-over-period performance of Qorvo's ongoing operations because (i) the expenses are non-cash in nature, and (ii) although the size of the grants is within our control, the amount of expense varies depending on factors such as short-term fluctuations in stock price volatility and prevailing interest rates, which can be unrelated to the operational performance of Qorvo during the period in which the expense is incurred and generally are outside the control of management. Moreover, we believe that the exclusion of stock-based compensation expense in presenting non-GAAP gross margin and other non-GAAP financial measures is useful to investors to understand the impact of the expensing of stock-based compensation to Qorvo's gross margins and other financial measures in comparison to prior periods. We also believe that the adjustments to profit and margin related to restructuring-related charges and acquisition and integration-related costs do not constitute part of Qorvo's ongoing operations and therefore the exclusion of these items provides management and investors with better visibility into the actual costs required to generate revenues over time and facilitates a useful evaluation of our historical and projected performance. We believe disclosure of non-GAAP gross margin has economic substance because the excluded expenses do not represent continuing cash expenditures and, as described above, we have little control over the timing and amount of the expenses in question. Non-GAAP gross margin also excludes net adjustments related to a long-term capacity reservation agreement as we believe these net adjustments are not reflective of the performance of our ongoing business.

Supplemental information on Non-GAAP financial measures (continued)

Non-GAAP operating expenses and operating margin. Non-GAAP operating expenses and operating margin exclude stock-based compensation expense, amortization of intangible assets, acquisition and integration-related costs, goodwill impairment, restructuring-related charges, net adjustments related to a long-term capacity reservation agreement, gain or loss on disposal of business and assets and certain other expenses or income. We believe that presentation of a measure of operating expenses and operating margin that excludes amortization of intangible assets and stock-based compensation expense is useful to both management and investors for the same reasons as described above with respect to our use of non-GAAP gross margin. We believe that acquisition and integration-related costs, goodwill impairment, restructuring-related charges, net adjustments related to a long-term capacity reservation agreement, gain or loss on disposal of business and assets and certain other expenses or income do not constitute part of Qorvo's ongoing operations and therefore, the exclusion of these costs provides management and investors with better visibility into the actual costs required to generate revenues over time and facilitates a useful evaluation of our historical and projected performance. We believe disclosure of non-GAAP operating expenses and operating margin has economic substance because the excluded expenses are either unrelated to ongoing operations or do not represent current cash expenditures.

Non-GAAP net income per diluted share. Non-GAAP net income per diluted share excludes the effects of stock-based compensation expense, amortization of intangible assets, acquisition and integration-related costs, goodwill impairment, restructuring-related charges, net adjustments related to a long-term capacity reservation agreement, gain or loss on disposal of business and assets, start-up costs, certain other expenses or income, gain or loss on investments, and also reflect an adjustment of income taxes. The income tax adjustment primarily represents the use of research and development tax credit carryforwards, deferred tax expense or benefit items not affecting taxes payable, adjustments related to the deemed and actual repatriation of historical foreign earnings, non-cash expense or benefit related to uncertain tax positions and other items unrelated to the current fiscal year or that are not indicative of our ongoing business operations. We believe that presentation of measures of net income per diluted share that exclude these items is useful to both management and investors for the reasons described above with respect to non-GAAP gross margin and non-GAAP operating expenses and operating margin. We believe disclosure of non-GAAP net income per diluted share has economic substance because the excluded expenses are either unrelated to ongoing operations or do not represent current cash expenditures.

Supplemental information on Non-GAAP financial measures (continued)

Free cash flow. Qorvo defines free cash flow as net cash provided by operating activities during the period minus property and equipment expenditures made during the period, and free cash flow margin is calculated as free cash flow as a percentage of revenue. We use free cash flow as a supplemental financial measure in our evaluation of liquidity and financial strength. Management believes that this measure is useful as an indicator of our ability to service our debt, meet other payment obligations and make strategic investments. Free cash flow should be considered in addition to, rather than as a substitute for, net income as a measure of our performance and net cash provided by operating activities as a measure of our liquidity. Additionally, our definition of free cash flow is limited, in that it does not represent residual cash flows available for discretionary expenditures due to the fact that the measure does not deduct the payments required for debt service and other contractual obligations. Therefore, we believe it is important to view free cash flow as a measure that provides supplemental information to our entire statement of cash flows.

Non-GAAP ROIC. Return on invested capital (ROIC) is a non-GAAP financial measure that management believes provides useful supplemental information for management and the investor by measuring the effectiveness of our operations' use of invested capital to generate profits. We use ROIC to track how much value we are creating for our shareholders. Non-GAAP ROIC is calculated by dividing annualized non-GAAP operating income, net of an adjustment for income taxes (as described above), by average invested capital. Average invested capital is calculated by subtracting the average of the beginning balance and the ending balance of equity plus net debt, less certain goodwill.

Net debt. Net debt is defined as unrestricted cash, cash equivalents and short-term investments minus any borrowings under our credit facility and the principal balance of our senior unsecured notes. Management believes that net debt provides useful information regarding the level of Qorvo's indebtedness by reflecting cash and investments that could be used to repay debt.

Forward-looking non-GAAP financial measures. This presentation contains forward-looking measures including gross margin and operating margin. We provide these non-GAAP measures to investors on a prospective basis for the same reasons (set forth above) that we provide them to investors on a historical basis. We are unable to provide a reconciliation of the forward-looking non-GAAP financial measures to the most directly comparable forward-looking GAAP financial measures without unreasonable effort due to variability and difficulty in making accurate projections for items that would be required to be included in the GAAP measures, such as stock-based compensation, amortization of intangible assets, acquisition and integration-related costs, restructuring-related charges, gain or loss on disposal of business and assets and goodwill impairment, which could have a potentially significant impact on our future GAAP results.

Supplemental information on Non-GAAP financial measures (continued)

Limitations of non-GAAP financial measures. The primary material limitations associated with the use of non-GAAP financial measures as an analytical tool compared to the most directly comparable GAAP financial measures are these non-GAAP financial measures (i) may not be comparable to similarly titled measures used by other companies in our industry, and (ii) exclude financial information that some may consider important in evaluating our performance, thus limiting their usefulness as a comparative tool. We compensate for these limitations by providing full disclosure of the differences between these non-GAAP financial measures and the corresponding GAAP financial measures, including a reconciliation of the non-GAAP financial measures to the corresponding GAAP financial measures in our earnings releases, to enable investors to perform their own analysis of our gross margin, operating expenses, operating margin, net income per diluted share and net cash provided by operating activities.
